Mary Scalf, Hamilton Spine Center, Dalton, GA

Patti Timlin, RN, Grant Spine Care, Columbus, OH

Rhonda Whiting, RN, Hamilton Spine Center, Dalton, GA

Topic: Software Modifications

Software Modifications

Attendees reviewed the list of available software modifications. New modifications include: creating testing orders, customizing letter types, a customizable medications drop-down list in the Other Medical History section, and customizable print summaries. Regarding creating testing orders, a suggestion was made to include a field for the name of the facility where the patient will have the testing completed. This suggestion has been added to the list of future modifications.

The question was asked whether ICD-9 codes could be entered on the testing order. If an organization chooses to list ICD-9 codes on their testing orders, these can be added in Customize System, under Impressions. Each impression can be edited to include the applicable code.

Organizations who opt to receive the available software modifications will receive all modifications. Some, such as the question, “Are you willing to consider surgery?”, can be turned “on” or “off” in Customize System. Several attendees indicated that their organizations would like to receive the software modifications. These organizations will be contacted shortly to discuss upgrading their system. Any organization that would like to request these modifications in the future should contact Priority Consult.
