

Innovative solutions for breast care management

Priority Consult® solves the medical management needs of your breast center.

Priority Consult Breast Care is an innovative patient-management system developed with assistance from the St. John Health Breast Care Program of Detroit to improve efficiency and productivity in the management of breast-care patients. The system provides hospitals, medical centers, physicians and staff with the tools to manage a patient from initial screening and diagnosis through treatment and follow-up care. Priority Consult ensures that patients receive the most appropriate level of care without delay.

How does Priority Consult work?

After a patient completes a mammography exam, Priority Consult enables your staff to collect and record the relevant medical history and subsequent BIRADS score. This collection of information assists your breast center staff in facilitating the next steps in the patient's care. As the patient progresses through your breast center, Priority Consult will continue to track the patient's progress as additional imaging, diagnostic procedures, and physical exams are completed during both the diagnostic and treatment phases of care.

Whatever your work flow management needs, Priority Consult will be there every step of the way.

Benefits of Priority Consult

- View, at any time, the status of every patient within your breast center
- Collect data required for a center of excellence designation
- Track your patient throughout her treatment experience
- Improve throughput within your breast center by increasing the number of patients your staff can manage effectively
- Ensure patient and referring physician satisfaction by providing timely communication and effective tracking
- Capture and decrease lag times between each appointment, biopsy and/or imaging date
- Increase the ability to capture additional patient volume for your testing and treatment facilities
- Ensure timely and accurate follow-up based on your protocols (e.g., one-year, three-year)
- Create a centralized database that supports reporting and benchmarking for your breast center

Multidisciplinary breast centers

Priority Consult will:

- Organize your breast center into a cohesive, integrated unit.
- Improve throughput while ensuring that no patient is overlooked or lost in the system.
- Track patients to ensure that each progresses in a seamless fashion.
